

QUJI BICHIA

FRONTEND DEVELOPER

Tbilisi, Georgia | quji.bichia@btu.edu.ge
github.com/Entropher | linkedin.com/in/qbichia

PROFILE

Junior frontend developer building responsive, accessible interfaces in hand-written HTML, CSS and JavaScript, with no framework between the design and the browser. Twenty-plus projects shipped to GitHub, from static layouts through DOM-driven UI components to full CRUD against REST APIs. I own a page end to end: semantic markup, mobile-first CSS, interaction logic, SEO metadata and deployment.

TECHNICAL SKILLS

Markup HTML5, semantic sectioning, ARIA attributes, Open Graph and meta tags, structured heading hierarchy

Styling CSS3, CSS Grid, custom properties, gradient masks, transitions and keyframe animation, mobile-first media queries; Tailwind CSS

JavaScript ES6+, DOM manipulation, event delegation, IntersectionObserver, FormData, XMLHttpRequest and Fetch, timers, array and object methods, data-* driven state, modular script structure

APIs REST integration with GET, POST, PUT and DELETE; JSON request and response handling; DummyJSON and JSONPlaceholder

Accessibility & SEO Keyboard-navigable controls, alt text, live regions, meta descriptions, robots directives, lazy-loaded images, crawlable structure

Tooling Git and GitHub, GitHub Pages deployment, VS Code, Prettier

SELECTED PROJECTS

Personal Portfolio Site · [HTML, CSS, JavaScript — no libraries](#) · github.com/Entropher/finalExam

- **Single-page portfolio built from scratch:** roughly 530 lines of HTML, 980 of CSS and 280 of JavaScript, with zero third-party dependencies.
- **Hero image slider** with autoplay, hover-to-pause and clickable pagination, using per-slide CSS custom properties so each portrait sits correctly inside a circular gradient mask.
- **Animated skill bars** that fill on scroll via IntersectionObserver, capturing each bar's target width, resetting it to zero, then unobserving so the animation runs once.
- **Multi-select project filter** driven by data-* attributes and a Set of active tags, so categories combine and the All button reflects the empty state.
- **Contact form** with native reportValidity() checks, FormData serialization, an XHR POST and an accessible success dialog (role=dialog, aria-modal) dismissible by button or click-outside.
- **Responsive** down to a 760px breakpoint, with a hamburger nav that toggles aria-expanded and collapses on link click, and a footer that reorders on small screens.

Product Manager Dashboard · [REST CRUD interface](#) · entropher.github.io/lesson22

- Full CRUD against the DummyJSON Products API: GET a paged list, GET by id, POST to add, PUT to update, DELETE to remove.
- One form serves create and edit modes, with heading and submit label switching when a product is loaded; row actions run through delegated listeners reading data-product-id and data-action, so no listener is bound per row.

Interactive Clock & Slider Widgets · [DOM and timer logic](#) · entropher.github.io/lesson20

- Real-time digital clock updating every second alongside a countdown to a fixed target time.
- Image slider with previous and next controls, pagination dots, autoplay, and pause when the pointer enters the slider area.

Flight Offers Board · [data rendering and event delegation](#) · entropher.github.io/lesson19

- Renders flight cards from a separate data module, removes cards and expands per-flight detail through delegated event handling, and derives cheapest fare and direct-flight availability from the dataset.

EDUCATION & TRAINING

Frontend Development & SEO Smart Academy, Tbilisi

20 graded lesson projects plus a midterm two-page site and a final exam portfolio, each version-controlled in its own GitHub repository. Coursework: semantic HTML, CSS layout systems, responsive design, JavaScript functions and data structures, DOM APIs, event handling, REST API consumption and SEO fundamentals.

PhD, Economics

Languages Georgian (native), English (professional working proficiency)
